Record Keeping

AKC Executive Field Agent-Recommended Follow-up Inspection

Upon arrival, at approx. 1700hrs., the breeder had 9 adult dogs and 19 puppies at the location. All the dogs were identified through microchip in which four were compared to the AKC records. During the day the dogs were all housed in outdoor kennels that were constructed from heavy gauge welded wire and no climb fencing on cement and dirt slabs. During the nights the dogs are all bedded in individual wire kennels which were housed in climate control buildings. Both the outdoor and indoor kennels were all clean and in good repair as well as having plenty of clean fresh water and shade. The breeder had numerous fenced in areas that were all large enough to exercise all the dogs. The indoor kennels also had solid plastic floors for the dogs. All the dogs were clean, healthy, and in good spirits. Four litter records and four ownership forms were reviewed and found to following the rules of the AKC. The breeder is in compliance with all the rules and regulations of the AKC and should be commended on the overall care and condition of her dogs, the construction and upkeep of her kennels and the organization of her records.
